

COVID-19 RESTAURANT AND BAR GUIDELINES

In accordance with Executive Order 2020-91 Restaurants and Bars are REQUIRED to:

- **Develop a COVID-19 preparedness and response plan**

Establish a response plan for dealing with a confirmed infection in the workplace. Designate one or more worksite supervisors to implement, monitor, and report on COVID-19 control strategies. See [Guidance on Preparing Workplaces for COVID-19](#) developed by OSHA. See [COVID-19 Preparedness and Response template](#).

- **Conduct daily entry self-screening protocol for employees**

Sample workplace health screening included.

- **Provide non-medical grade face coverings**

- *Require hosts and servers to wear face coverings in the dining area.*
- *Require employees to wear face coverings and gloves in the kitchen area when handling food, consistent with guidelines from the Food and Drug Administration (“FDA”).*

- **Maintain 6-ft distancing**

- *To the maximum extent possible, limit the number of employees in shared spaces, including kitchens, break rooms, and offices, to maintain at least a 6-ft distance between employees.*
- *Keep employees and patrons on premises at least six feet from one another to the maximum extent possible, using physical guides, such as tape on floors or sidewalks and signage on walls to ensure appropriate distance in any lines.*
- *Require 6-ft between parties or groups at different tables.*

- **Increase facility cleaning**

- *Clean and disinfect to limit exposure to COVID-19, especially on high-touch surfaces.*
- *Adopt protocols to clean and disinfect the facility in the event of a positive COVID-19 case. Close down immediately to allow for a deep clean.*
- *Make cleaning supplies available to employees upon entry, provide time for hand washing or hand sanitizer use.*

Questions?

Contact the Health Department of Northwest Michigan at 1-800-386-5959

COVID-19 RESTAURANT AND BAR GUIDELINES

- **Train employees**

At a minimum, cover workplace infection-control practices, proper use of PPE, steps for symptomatic employees, reporting unsafe working conditions, food safety guidelines, and managing symptomatic customers.

- **Confirmed COVID-19 case(s)**

- *If an employee, within 24 hours the employer must contact the local public health department, and any co-workers, contractors or suppliers that came into contact with that person.*
- *Employer will allow employees with confirmed or suspected COVID-19 to return to work only after they are no longer infectious according to latest [CDC guidelines](#).*

- **Limit capacity to 50% of normal seating**

- **Communications materials for customers**

Create pamphlets or post signs to:

- *Inform customers of changes to store practices and to explain precautions the store is taking to prevent infection.*
- *Inform customers not to enter if they are or recently have been sick.*
- *Instruct customers to wear face coverings until they reach their table.*

Signs for workplaces are available in [Re-Engagement Resources for Businesses](#).

- **Close the following areas:**

- *Waiting areas – ask customers to wait in cars for a call when a table is available.*
- *Self-serve food and drink – buffets, salad bars, and drink stations*

- **Limit and clean shared items**

Limit items shared between customers (condiments, menus). Clean high contact areas after each customer.

- **Physical barriers**

Install sneeze guards and partitions at cash registers, bars, host stands, and other areas where maintaining distance of 6-ft is difficult.

COVID-19 RESTAURANT AND BAR GUIDELINES

Instructions for Handwashing Stations and Hand Sanitizer

Your establishment will need to ensure all employees have access to handwashing stations. In addition, hand sanitizers can be provided. The CDC recommends that hand sanitizers be greater than 60% ethanol or 70% isopropanol.

Basic Handwashing Procedures

Step 1: Wet hands and arms using running water as hot as can be tolerated

Step 2: Apply soap, using enough to build up a good lather

Step 3: Scrub hands and arms vigorously for 20 seconds; clean under fingernails and between fingers

Step 4: Rinse hands and arms thoroughly using running warm water

Step 5: Dry hands and arms using single-use paper towel or hand dryer. DO NOT use your apron or uniform

Step 6: Use a paper towel to turn off the faucet and ensure paper towel goes in the trash receptacle

Coronavirus Disease (COVID-19) Workplace Health Screening

Company Name: _____

Employee Name: _____

Date: _____

Time In: _____

In the past 24 hours, have you experienced:

Subjective fever (felt feverish): Yes No

New or worsening cough: Yes No

Shortness of breath: Yes No

Sore throat: Yes No

Vomiting/Diarrhea: Yes No

Current temperature: _____

If you answer “yes” to any of the symptoms listed above, or your temperature is 100.4 °F or higher, please do not go into work. Self-isolate at home and contact your primary care physician’s office for direction.

- You should isolate at home for minimum of 7 days since symptoms first appear.
- You must also have 3 days without fevers and improvement in respiratory symptoms

Have you had close contact in the last 14 days with an individual diagnosed with COVID-19? Yes No

Have you engaged in any activity or travel within the last 14 days which fails to comply with the *Stay Home, Stay Safe* Executive Order? Yes No

Have you been directed or told by the local health department or your healthcare provider to self-isolate or self-quarantine? Yes No

If you answer “yes” to either of these questions, please do not go into work. Self-quarantine at home for 14 days.

OFFICE OF CHEMICAL SAFETY AND POLLUTION PREVENTION

List N: EPA's Registered Antimicrobial Products for Use Against Novel Coronavirus SARS-CoV-2, the Cause of COVID-19

Date: 03/03/2020

An individual pesticide product may be marketed and sold under a variety of names. If you are seeking additional information about a pesticide product, refer to the EPA Registration Number (EPA Reg. No.), found on the product label, not the brand name. When purchasing a product for use against a specific pathogen, check the EPA Reg. No. versus the products included on this list.

All EPA-registered pesticides must have an EPA Registration Number. Alternative brand names have the same EPA Reg. No. as the primary product. The EPA Reg. No. of a primary product consists of two set of numbers separated by a hyphen, for example EPA Reg. No. 12345-12. The first set of numbers refers to the company identification number, and the second set of numbers following the hyphen represents the product number.

In addition to primary products, distributors may also sell products with identical formulations and identical efficacy as the primary products. Although distributor products frequently use different brand names, you can identify them by their three-part EPA Reg. No. The first two parts of the EPA Reg. No. match the primary product, plus a third set of numbers that represents the Distributor ID number. For example, EPA Reg. No. 12345-12-2567 is a distributor product with an identical formulation and efficacy to the primary product with the EPA Reg. No. 12345-12.

Information about listed products is current as indicated by the dates on this list. If you would like to review the product label information for any of these products, please visit our [product label system](#). Inclusion on this list does not constitute an endorsement by EPA.

CLEANING & DISINFECTION For Facilities After Suspected or Confirmed COVID-19 Exposure

Michigan.gov/Coronavirus

Timing and location of cleaning and disinfection of surfaces.

At a school, daycare center, office, or other facility that **does not house people overnight**:

It is recommended to close off areas used by the ill persons and wait as long as practical before beginning cleaning and disinfection to minimize potential for exposure to respiratory droplets. Open outside doors and windows to increase air circulation in the area. If possible, wait up to 24 hours before beginning cleaning and disinfection.

How to clean and disinfect.

Surfaces

If surfaces are dirty, they should be cleaned using a detergent or soap and water prior to disinfection.

For disinfection, diluted household bleach solutions, alcohol solutions with at least 70% alcohol, and most common EPA-registered household disinfectants should be effective.

- Diluted household bleach solutions can be used if appropriate for the surface. Follow manufacturer's instructions for application and proper ventilation.
- Check to ensure the product is not past its expiration date. Never mix household bleach with ammonia or any other cleanser.

- Unexpired household bleach will be effective against coronaviruses when properly diluted.

Prepare a bleach solution by mixing:

- Five tablespoons (1/3 cup) bleach per gallon of water, or
- Four teaspoons bleach per quart of water.

Products with EPA-approved emerging viral pathogens claims

are expected to be effective against COVID-19 based on data for harder to kill viruses. Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).

Soft Surfaces

For soft (porous) surfaces such as carpeted floor, rugs, and drapes, remove visible contamination if present and clean with appropriate cleaners indicated for use on these surfaces. After cleaning:

- If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely. Otherwise, use products with the EPA-approved emerging viral pathogens claims that are suitable for porous surfaces.

Linens, Clothing, and Other Items That Go in the Laundry

- **Do not shake dirty laundry; this minimizes the possibility of dispersing virus through the air.**
- **Wash items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely. Dirty laundry that has been in contact with an ill person can be washed with other people's items.**
- **Clean and disinfect hampers or other carts for transporting laundry according to guidance above for hard or soft surfaces.**

Personal protective equipment (PPE) and hand hygiene considerations.

Cleaning staff should wear disposable gloves and gowns for all tasks in the cleaning process, including handling trash.

- **Gloves and gowns should be compatible with the disinfectant products being used.**
- **Additional PPE might be required based on the cleaning/disinfectant products being used and whether there is a risk of splash.**
- **Gloves and gowns should be removed carefully to avoid contamination of the wearer and the surrounding area. Be sure to clean hands after removing gloves.**
- **Gloves should be removed after cleaning a room or area occupied by ill persons. [Clean hands](#) immediately after gloves are removed.**
- **Cleaning staff should immediately report breaches in PPE (e.g., tear in gloves) or any potential exposures to their supervisor.**

Cleaning staff and others should clean hands often.

Clean hands often including immediately after removing gloves and after contact with an ill person, by washing hands with soap and warm water for 20 seconds. If soap and warm water are not available and hands are not visibly dirty, an alcohol-based hand sanitizer that contains at least 60% alcohol may be used. However, if hands are visibly dirty, always wash hands with soap and warm water.

Follow normal preventive actions while at work and home, including cleaning hands and avoiding touching eyes, nose, or mouth. Additional key times to clean hands include:

- **After blowing one's nose, coughing, or sneezing**
- **After using the restroom**
- **Before eating or preparing food**
- **After contact with animals or pets**
- **Before and after providing routine care for another person who needs assistance (e.g., a child)**
