RE: Well Isolation to Sewage Treatment and Disposal Systems

To whom it may concern:

Per Section 6-11 of the District Sanitary Code serving Antrim, Charlevoix, Emmet, and Otsego Counties, a residential drinking well is required to be isolated at least 50 feet from the septic tank and absorption field (drainfield). This isolation distance corresponds with the Michigan Water Well Construction and Pump Installation Code R 325.1622(d) which states a well shall be located a minimum of 50 feet to a septic tank, subsurface disposal field, or a drywell.

Please do not hesitate to contact our office with any questions or concerns.
